22 Wing/CFB North Bay was founded in 1951 as RCAF Station North Bay, part of the country's new national air defence network built in response to the Cold War threat of attack from the Soviet Union. In 1963 it became home to Canada's North American Air (now Aerospace) Defence Command control centre, responsible for the surveillance, aircraft identification, fighter control and early warning system (EWS) in the Canadian Arctic, east-central Canada and Maritimes.

- Surveillance and identification of all air traffic approaching North America is accomplished using radar information received via satellite from the North Warning System across the Canadian Arctic, coastal radars on the east and west coasts of Canada, and Airborne Warning and Control System Aircraft.
